Task 1

Print your

- Name
- Department
- College

Each on a separate line.

```
print("Name: Sachin Shinde")
print("Department: CSE AIDE B")
print("College: Jain University")
```

Output:

```
Name: Sachin Shinde
Department: CSE AIDE B
College: Jain University
```

Task 2

Print the following pattern.

```
*******
*******
*******
```

```
print("*******")
print("*******")
print("*******")
```

Output:

```
*******
*******
*******
```

Task 3

Print the following using a single print() statement.

Python is Easy

```
print("Python is easy")
```

Output:

```
Python is easy
```

Task 4

Print

1
12
123
1234
12345

```
print("1")
print("12")
print("123")
print("1234")
print("12345")
```

Output:

```
1
12
123
1234
12345
```

Task 5

Use \n to print
Computer
Science
Engineering

```
print("Computer\nScience\nEngineering")
```

Output:

```
Computer
Science
Engineering
```

Task 6

Use \t to print
Name Age City

```
print("Name\tAge\tCity")
```

Output:

```
Name    Age     City
```

Task 7
Write a Python program with a **single-line comment** explaining the purpose of the program.

#Use of Python
print(“Python is easy”)
Output:

```
Python is easy
```

Task 8
Write a Python program using **multi-line comments**.

#Name of the student
print("Name: Sachin Shinde")
#Programme of the student
print("Programme: CSE AIDE B")
#Date of birth of the student
print("Date of birth: 15/4/2007")
#Current semester of the student
print("Current semester: 3rd semester")

Output:

```
Name: Sachin Shinde
Programme: CSE AIDE B
Date of birth: 15/4/2007
Current semester: 3rd semester
```

Task 9
Write a program that contains

- Three comments
- Three print statements

#given two numbers
a=10
b=20
print(a,b)
#adding the given two numbers
print(“Addition:”, a+b)
#subtracting the given two numbers
print(“Subtraction:”, a-b)

Output:

```
10 20
Addition: 30
Subtraction: -10
```

Task 10
Create a variable called name.
Store your name and print it.

```
Name= "Sachin Shinde"
print(Name)
```

Output:

```
Sachin Shinde
```

Task 11

Store
10
20
30
in three different variables and print them.

```
a=10
b=20
c=30
print(a,b,c)
```

Output:

```
10 20 30
```
